Mermet Solar Control Fabrics

Mermet Solar Control Fabrics have been developed to meet the demand for decorative blinds that maximise heat and glare protection while preserving the view. Fitted internally, Mermet Solar Control Fabrics can reduce energy consumption by between 23% and 33% depending on the colour chosen. When fitted externally, these energy savings are increased to more than 60%.

Mermet fabrics are available in a wide variety of weaves, openness factors, colours and roll widths (155cm-310cm). Refer to the Modulight Rapid Selection Guide and the Technical Data Chart (back cover flap) for details.

Over 200 colours are available to harmonise with all decor and architecture.

AR KELIO® Architecture & Signage

Internal Transparent Fabrics

- M-Screen
- T-Screen
- E-Screen

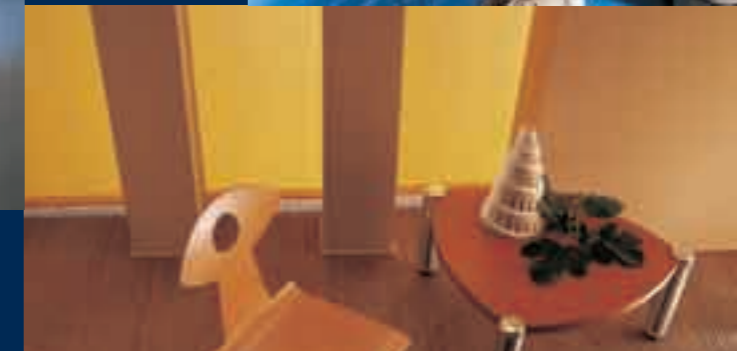

From the most prestigious residences to modern apartments, Mermet is proud to offer you the highest standard in Solar Control Fabrics with a view.

Internal Dim out Fabrics

- Obion 11203
- Fiz 12905

Dress your room with soft natural light. Preserve your view to the outside with daytime privacy.

Protect your carpets and fabrics from the damaging effects of the sun.
All Mermet Fabrics are flame retardant, non toxic and do not promote bacterial growth.

Internal Blackout Fabrics

Flocké 11201
Ubaye 11902

External Fabrics

Sunscreen Satiné 5500
Sunscreen Satiné 5500 Opaque
Sunscreen Natté 4500

A Quality Approach

Mermet Sunscreen fabrics are woven with a Glass Fibre core.

The benefits of Glass Fibre are :

- high tensile strength
- high heat resistance
- high thermal conductivity
- dimensional stability
- chemical resistance
- inherent flame resistance : The Mermet Sunscreen range of fabrics has been tested and complies with Australian Standard AS1530.2 and AS1530.3.

Mermet has placed considerable emphasis on producing a perfectly calibrated fine textured yarn - the yarn is uniform in all aspects of construction.

This uniformity ensures the best possible control of heat and light.

ARKELIO®

Defining shapes and space with total freedom.

Arkelio® by MERMET is a range of technical fabrics specifically designed for architectural signage, furnishings, interior decoration, interior/exterior fittings and solar protection.

Rapid Selection Guide

The Rapid Selection guides are designed to enable you to achieve optimum benefit from choosing the right solar protection fabric.

The system is based on four comfort factors :

- NL** natural light level of incoming light
- EC** eye comfort glare control
- HP** heat protection improved thermal control
- CV** contrast vision quality of exterior view

These factors are applied to each fabric in relation to its own features; the openness factor, weave, colour and size of the mesh and hence its energy and light qualities (transmission, reflection, absorption).

Simply, the rapid selection guide rates each fabric and colour from 1 to 40 for each of the four comfort factors, 40 giving you optimum performance. For example, Eye Comfort (glare control), a rating of 1 would mean little or no glare control, whereas a rating of 35 to 40 would mean excellent glare control.

There are three steps to using the Rapid Selection Guide :

1. Decide from the four factors (NL, EC, HP and CV), which two are the most important to your application.
2. From a colour swatch, choose the fabric colour that best suits the decor.
3. Check the Rapid Selection Guide to see if the fabric and colour meet your comfort requirements.

Please refer to fold over back cover for detailed rapid selection guide.

MODULIGHT - RAPID SELECTION GUIDE

Rapid Selection Guide

NL natural light LEVEL OF INCOMING LIGHT

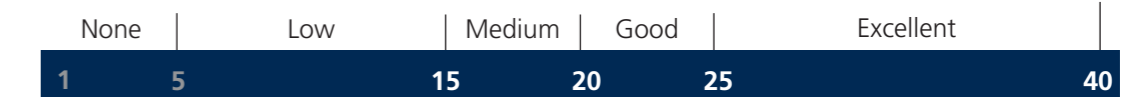

Tip : for the same type of fabric, light colours let through more light than dark colours.

EC eye comfort GLARE CONTROL

Tip : for the same type of fabric, dark colours provide better glare control.

HP heat protection IMPROVED THERMAL CONTROL

Tip : outside screens provide better thermal control than indoor screens.

CV contrast vision QUALITY OF THE VIEW TO THE OUTSIDE

Tip : the quality of visibility does not only depend on the openness or light transmission, it also depends on colour. Darker colours will provide better outward visibility.
