

SOMFY RTS™ Wireless Solution

The RTS™ system utilizes special motors with a built in antenna array which allows for wireless, radio based, remote control of motors. In addition to the special RTS motor, the system consists of single and four channel hand held transmitters and wall mounted transmitters (battery or DC powered). One intermediate stop is programmable as well. The RTS system offers RF wireless control to any RTS intelligent motor within a 70-foot range and through two solid concrete walls. The system can also easily interface with home automation software via RS232.

FEATURES

- An integrated system of new wireless RF controllers including the RTS hand-held transmitter and the RTS wall switch.
- The RTS tubular motor, with built in antenna features user programmable top and bottom limit switches, can memorize up to 12 transmitters and one intermediate stop position.
- The RTS four channel hand-held transmitter or RTS wall switch can be programmed for individual, group and master control.
- RTS control points are equipped with 16 million rolling codes making interference a non-issue.
- The RTS system eliminates the need for wire runs to connect switches or the need for accessibility to a control unit.
